# Organic Compounds

**short summary of iupac nomenclature of organic compounds** - short summary of iupac nomenclature of organic compounds introduction the purpose of the iupac system of nomenclature is to establish an international standard of naming compounds to facilitate communication. the goal of the system is to give each structure a unique and unambiguous name, and to correlate each name with a unique and unambiguous ... **an introduction to organic chemistry - cffet** - introduction to organic chemistry chem. nat. substances p3 an introduction to organic chemistry organic chemistry is the study of carbon containing compounds and their properties. this includes the great majority of chemical compounds on the planet, but some substances such **toxic organic compounds - bridgewater state university** - toxic organic compounds toxicological chemistry of chemicals, cont. 1 synthetic chemicals toxic organic compounds types: most are derived from petroleum or natural gas polycyclic aromatic hydrocarbons (pahs) organochlorine insecticides organophosphate and carbamate insecticides organic herbicides dioxin contaminant of herbicides and wood ... **naming organic compounds: alkanes** - • alkanes are organic compounds that only contain single bonds between carbon elements. alkanes are often referred to as saturated hydrocarbons. alkane compounds end in -ane. • the longest continuous carbon chain in the compound is the parent chain. parent chains utilize prefixes to show the amount of carbons in the chain. **chaer properties and reactions of organic compounds** - chapter 9 properties and reactions of organic compounds 243 • dipole-dipole attractions: molecules such as hcl, hbr and ch<sub>3</sub>cl are polar and have permanent dipoles. the partial positive charge on one molecule is electrostatically attracted to the partial negative charge on a neighbouring **nomenclature of organic compounds - chymist** - these compounds had to come from a living organism, now they are synthesized in the laboratory. the simplest organic compounds are composed of carbon and hydrogen and are known as hydrocarbons. there are four types, or classes, of hydrocarbons: alkanes: contain all c-c single bonds. these are known as saturated hydrocarbons. **method 8260b volatile organic compounds by gas ...** - 1.1 method 8260 is used to determine volatile organic compounds in a variety of solid waste matrices. this method is applicable to nearly all types of samples, regardless of water content, including various air sampling trapping media, ground and surface water, aqueous sludges, caustic **glossary of volatile organic compounds** - glossary of volatile organic compounds • ethylbenzene • carbon tetrachloride • benzene • 1,1,1-trichloroethane • xylenes • tetrachloroethylene • toluene • trichloroethylene • styrene • 1,4-dichlorobenzene **introduction to organic nomenclature** - as organic chemistry developed and structures became more complex, a systematic method for naming organic compounds became necessary. the international union of pure and applied chemistry (iupac) is the organism that sets the rules for nomenclature of organic compounds today. names that **nomenclature in organic chemistry** - nomenclature in organic chemistry 1. introduction it is important that organic compounds are correctly and unambiguously named so that there can be absolutely no confusion about what compounds are actually being reported or described. there have been many conventions for naming organic compounds - some have **chapter 4 lab: identifying organic compounds** - which substances did not test positive for any of the organic compounds? 6. what is the purpose of using distilled water as one of your test substances? 7. what do all of the indicators you have used have in common? 8. what conclusions could you make if a positive test for any of the organic compounds occurred in the test tube containing ... **organic substances in water - usgs** - organic substances are found virtually everywhere in our environment, and their importance in water-quality studies is being realized rapidly. not only do naturally occurring organic compounds present problems in water utilization, but the myriad of manmade organic compounds have been shown to have many detrimental effects. **from organic chemistry - (ucr) department of chemistry** - •organic chemistry •bon voyage preview organic chemistry describes the structures, properties, preparation, and reactions of a vast array of molecules that we call organic compounds. there are many different types of organic compounds, but all have carbon as their principal constituent atom. these carbon **identification of unknown organic compounds - ucy** - identification of unknown organic compounds introduction the identification and characterization of the structures of unknown substances are an important part of organic chemistry. although it is often possible to establish the structure of a compound on the basis of spectra alone (ir, nmr, etc.), the spectra typically must be supplemented with
